Education

University of Waterloo — **Sep 2025 – May 2029**
Bachelor of Computer Science, Finance, & Statistics – Triple Major — GPA: 3.8/4.0

- President's Scholarship of Distinction ($5000), Undergraduate Achievement Award ($1500)
- Relevant Coursework: Object-Oriented Programming (Advanced), Sequential Programming (Advanced), Functional Programming (Advanced), Interpreters (Advanced), Linear Algebra, Calculus, Probability, Statistics, Proofs, Financial Markets & Data Analytics

Experience

Roblox — **Jun 2026 – Aug 2026**
Software Engineer Intern | Network Infrastructure — San Mateo, CA

- Worked alongside network engineers to automate network deployments, pushing to **5000+ production devices** in global datacenters with a GitHub Actions CI/CD pipeline equipped with staged expansion and health checks
- Orchestrated Temporal Workflows with LLM analysis & Slack alerting for safe, autonomous rollout of configuration changes, saving **400+ engineering hours** annually and identifying issues on 20+ network devices
- Identified and fixed a resource leak in an internal network service, recovering 7% CPU utilization across devices

Waterloo Quant Club — **Jan 2026 – Present**
Software Engineer — Waterloo, ON

- Engineered portal.waterlooquantclub.com, a full-stack club recruitment & event portal hosted on AWS for **1200+ users**
- Launched a Grafana observability platform with 100+ metrics, including membership and infrastructure monitoring
- Built and deployed 2v2bluff, a real-time multiplayer Rust/WebSocket card game supporting four concurrent players

Tells.dev — **Apr 2026 – Jun 2026**
Co-Founder — Waterloo, ON

- Built stealth browser infrastructure enabling AI agents to survive production bot detection in autonomous web sessions
- Scaled startup from 0 to 14 paying customers in first month, amassing **50k+ minutes of session time** and generating interest from Angel Investors & VC firms

Sunnybrook Research Institute — **Jul 2025 – Aug 2025**
Software Research Intern — Toronto, ON

- Built an event tracing, playback, and logging tool that records and simulates clinician workflows in Focused Ultrasound software, surfacing 5+ defects and edge cases in real usage patterns
- Automated regression testing by generating synthetic JSON event flows and validating results against recorded baselines, **cutting testing time by 91%**

Projects

Jevis: Hack The North 2026 Winner ($2000) | Python, DOM, JEV, OpenAI

- Engineered an agentic harness for browser use using the JEV System One Model, **decreasing token cost by 250x** compared to GPT-6 Astra
- Sped up queries on Walmart from **5 minutes to 44 seconds** using a DOM-based approach and orchestrator models
- Built a caching layer for repeated agent tasks via precomputed instruction paths, achieving a 15% cache hit rate

Pharmagotchi: AI Pharmacy Companion App | Kotlin, Android Studio, Figma, OpenRouter

- Built a Tamagotchi-inspired Android companion app to track health & medications and connect users with physicians
- Integrated an OpenRouter-powered chat assistant with Retrieval-Augmented Generation (RAG) that parses health conditions and medications into structured JSON vitals and provides context-aware medication guidance
- Connected Fitbit tracking devices through the Google Health API, centralizing health data for seamless monitoring

Skills

Languages	Python, C++, Java, C#, Rust, Go, Kotlin, TypeScript, SQL, Bash
Technologies	Temporal, gRPC, REST, PyTorch, Scikit-learn, Pandas, NumPy, OpenCV, PostgreSQL, LLMs, React
Tools	Linux, Git, Docker, AWS, GitHub Actions, Grafana, OpenRouter, Jupyter, Android Studio

Competitions

Galois Math Contest Honor Roll · Canadian Computing Competition Distinction · ICDC International Finalist
